## EXPERIENCE

### DoD, San Angelo — *Funded Research*

*Contributor* June 2025 -January 2026

AI-driven cybersecurity research focused on automated knowledge graph construction from Cyber Threat Intelligence (CTI) reports.

- Built LLM-assisted pipelines to extract structured threat intelligence triples from unstructured CTI data.
- Implemented semantic chunking and consensus filtering to improve extraction precision and reduce hallucinations.
- Developed automated validation and repair mechanisms for noisy knowledge graph triples.
- Modeled adversary relationships linking threat actors, techniques, and infrastructure using graph-based reasoning.

Published research includes:

- [\(PDF\) Semantic Chunking and Consensus Filtering for Structured Extraction of Cyber Threat Intelligence](#)
- [Automated Validation and Repair of Knowledge Graph Triples for Cyber Threat Intelligence](#)

### Intellivega – Software Developer ([ASP.NET](#))

October-2025–Present

- Built backend web applications using ASP.NET and C#.
- Designed relational database schemas and optimized SQL queries in PostgreSQL.
- Implemented RESTful APIs and CRUD services with performance-focused data structures.
- Applied algorithmic problem-solving to improve backend processing efficiency.

## EDUCATION

Angelo State University – San Angelo, TX

B.S. in Computer Science | Expected January 2028

GPA: 3.8

**Relevant Coursework:**

Data Structures & Algorithms, Systems Programming, Software Engineering, Object-Oriented Programming,

## SKILLS

**Languages:** Python, C#, JavaScript, c++

**Frameworks:** ASP.NET, Unreal Engine 5

**Databases:** PostgreSQL, SQL (schema design, joins, indexing, normalization)

**Core Competencies:**

- Data Structures & Algorithms
- Knowledge Graph Construction & Triple Modeling
- LLM-assisted Information Extraction
- Graph-Based Entity Resolution
- REST API Development
- Backend System Design
- Agile Development

### NASA/Barrios, The DataMine

—Undergraduate Research Assistant

- Engineered immersive 3D simulations in Unreal Engine 5 to visualize the NASA Artemis Gateway station.
- Implemented orbital mechanics simulations of Earth, Moon, Sun, and Gateway with real-time spatial transitions and cinematic camera systems.
- Developed modular C++ systems to manage physics interactions and dynamic lighting environments.
- Co-authored a published academic paper detailing simulation architecture and system impact.

Cybersecurity, Game Development

**Honors:** Dean's List | Distinguished Scholarship Recipient | DoD Research Grant Recipient | Published Research Author
