SUMMARY

Computer Science undergraduate (3.8 GPA) with DoD-funded research in automated cyber-threat-intelligence (CTI) knowledge-graph construction and two published papers, plus production backend experience building ASP.NET Core / C# web applications and REST APIs on PostgreSQL. Seeking software engineering and research internships in cybersecurity, AI, and backend systems.

EDUCATION

Angelo State University — San Angelo, TX

Expected January 2028

B.S. in Computer Science | GPA: 3.8

Relevant Coursework: Data Structures & Algorithms, Systems Programming, Software Engineering, Object-Oriented Programming, Cybersecurity, Game Development

Honors: Dean's List • Distinguished Scholarship Recipient • DoD Research Grant Recipient • Published Research Author

EXPERIENCE

Software Developer (ASP.NET) — Intellivega

Oct 2025 – Present

- Build and maintain backend web applications using ASP.NET Core and C#.
- Design normalized relational schemas and optimize SQL queries in PostgreSQL (indexing, joins, normalization).
- Implement RESTful APIs and CRUD services using performance-focused data structures.
- Apply algorithmic problem-solving to improve backend processing efficiency.

Funded Research Contributor — Department of Defense (DoD), San Angelo

Jun 2025 – Jan 2026

AI-driven cybersecurity research: automated knowledge-graph construction from Cyber Threat Intelligence (CTI) reports.

- Built LLM-assisted pipelines to extract structured threat-intelligence triples from unstructured CTI data.
- Designed semantic chunking and consensus-filtering techniques that improved extraction precision and reduced model hallucinations.
- Developed automated validation and repair mechanisms to correct noisy knowledge-graph triples.
- Modeled adversary relationships across threat actors, techniques, and infrastructure using graph-based reasoning.

Undergraduate Research Assistant — NASA / Barrios — The DataMine

[Mon Year – Mon Year]

- Engineered immersive 3D simulations in Unreal Engine 5 to visualize the NASA Artemis Gateway station.
- Implemented orbital-mechanics simulations of the Earth, Moon, Sun, and Gateway with real-time spatial transitions and cinematic camera systems.
- Developed modular C++ systems managing physics interactions and dynamic lighting environments.
- Co-authored a published academic paper detailing the simulation architecture and its system impact.

PUBLICATIONS

- Cawthon, S. [add co-authors]. "Semantic Chunking and Consensus Filtering for Structured Extraction of Cyber Threat Intelligence." [Venue, Year].
- Cawthon, S. [add co-authors]. "Automated Validation and Repair of Knowledge Graph Triples for Cyber Threat Intelligence." [Venue, Year].
- [Co-authored] "[Title of NASA Artemis Gateway simulation paper]." [Venue, Year].

TECHNICAL SKILLS

Languages: Python, C#, C++, JavaScript, SQL

Frameworks & Tools: ASP.NET Core, Unreal Engine 5, REST APIs, Git, Agile

Databases: PostgreSQL (schema design, indexing, joins, normalization)

Focus Areas: Data Structures & Algorithms, Knowledge Graph Construction & Triple Modeling, LLM-Assisted Information Extraction, Graph-Based Entity Resolution, Backend System Design
